Imaging for tomorrow.

The campaign for a new CT scanner.

Mercy Medical Center performed over 20,000 CT scans in 2021. The CT scanner is the most utilized machine in our Radiology Department and has reached end of life. A new CT scanner will allow our medical center to continue conducting a high volume of exams with the latest in technology, elevating the quality of care our patients receive.

CT imaging is vital technology supporting programs and services such as:

- Heart and Vascular Institute
- Stroke Program
- Neurology Services
- Precision Biopsy Program
- Center for Total Joint Replacement
- Emergency and Trauma Services

Our patients deserve the very best, and philanthropy can help make a difference in our community.

Your help is needed to fund the purchase of a Siemens SOMATOM Drive CT Scanner featuring Dual Source technology.
